

# How Haugland Marine Simplified Fleet Tracking with NeboFleet

## COMPANY OVERVIEW

### Haugland Marine Services

Industry: Marine Construction

Location: East Coast, U.S.

## THE CHALLENGE

Before adopting NeboFleet, Haugland Marine tracked its vessels and barges using a manually updated Excel spreadsheet. This created:

- Daily time waste on manual entries
- Communication gaps across job sites
- Inaccurate billing and reporting
- Limited visibility into asset movement

## THE SOLUTION: NEBOFLEET

TBS Safety recommended NeboFleet, a fleet tracking platform that offers:

- Real-time vessel and barge location
- Automated voyage logs and history
- Usage and efficiency metrics
- Log archives to support investigations

*"Nebo was our first and only trial. The accuracy of the units and the easily navigable site made the decision simple."*

— Joe Stevenson, Assistant Port Captain

## THE RESULTS

After rolling out NeboFleet, Haugland saw key improvements across their fleet operations:

- **Time Saved:** No more spreadsheet updates
- **Improved Communication:** Real-time data means fewer missteps
- **Streamlined Reporting:** Automated logs improve billing accuracy
- **Asset Protection:** Logs support incident investigations

*"Nebo has made fleet tracking simple and easy. It's hard to imagine not having it now."*

## EASY IMPLEMENTATION

- AA battery-powered devices for rapid installation
- Short onboarding with immediate adoption
- Immediate and measurable results

*"We use Nebo to monitor barge movement across multiple job sites from one dashboard. What used to take hours now takes minutes."*
